### US Cultural Highlights:

- Field trips, Recreation, Summer Events
- City tour: restaurants, business, lifestyle

Deadline to Apply: March 31, 2024

Cost: \$5,200

# Global Accelerator Program

## Academic Inquiry and Research

This rigorous course develops students' abilities to identify and answer research questions in any academic discipline. Students will enhance their inquiry skills by designing a specific research question, based on a topic of their choosing, locating and summarizing relevant academic source matter, and crafting an approach to answering that question. Research specialists from the Wake Forest faculty will guide methods discussions, host field trips, and guide the design of research projects to give students an introduction to college-level inquiry and complex problem solving.

This course is designed as a college-level seminar. The small class size allows for emphasis of high-level discussions and interpretation of data. Free-flowing academic exchange with class peers and professors is encouraged and will be necessary for successful completion of this course.

## The Science of Human Behavior and Wellness

This course will provide students with a comprehensive understanding of the scientific principles underlying mental health and wellbeing. Students will gain insight into the complex interplay between neurobiological, psychological, and environmental factors that contribute to mental health and wellbeing. Students will also explore pharmacological and psychological treatments as well as mindfulness and arts-based practices used to promote wellbeing.

Note: The Social Sciences course is a pre-requisite for nomination and application to the Capstone Program hosted in Cambridge, England during Summer, 2025.
